THESE COMPONENTS ARE REQUIRED
TO INSTALL THE PRO-GARD REAR WINDOW GUARDS

I. Refer to the diagram above to verify all parts were received.

II. The following tools will be required to complete the installation:

- | | |
|-------------------------------|-----------------------------------|
| 1. Phillips Head Screw Driver | 2. 9/32" or 7 mm Deep Well Socket |
| 3. 3/32" Diameter Drill Bit | 4. 3/8" Drive Ratchet |
| 5. T30 Torx Bit | 6. T45 torx Bit |
| 7. T50 Torx Bit | |

III. Read all instructions carefully before starting the assembly process.

NOTE: *Locate all wiring, fuel lines, brake lines, and /or cooling lines before drilling holes or installing any fasteners.*

IV. Driver and Passenger Window Guard Installation

- A. Remove the trim on the floorboard that surrounds the rear door latch.
- B. Remove the four covers from the pillar trim panels, and unbolt using a 9/32' or 7 mm socket. Disconnect the speaker and remove the trim (Fig. 1).
- C. Remove small trim pieces at the bottom of the passenger door openings. Remove third-row seat and seat belts with a T50 torx bit.
- D. Remove cargo hooks from lower side trim at the back of the vehicle using a T45 torx bit (Fig. 2).

Figure 1

- E. Disconnect 12V power supply connector and remove trim panels from the vehicle.
- F. Position corresponding window guard into the window structure of the vehicle. Once seated, apply pressure to the rear window guard (Fig 3). Secure the center lower bracket first to the vehicle with the provided self-tapping screws. It may be necessary to drill a 3/32" pilot hole before using the self-tapping screws (use a phillips head driver).

Figure 2

- A. Driver Side - Next secure the forward most lower bracket (Fig 4). Ensure that the window guard is level with the headliner and continue securing remaining brackets with supplied hardware.
- B. Passenger Side - Next secure the rear most upper bracket. Ensure that the window guards are level with the headliner and continue securing remaining brackets with supplied hardware.
- G. Hold the interior trim panels in place over the window guard. Carefully mark the areas where the trim contacts the window guard brackets, and trim away these areas on the panels so that the panels will fit properly into place over the armor. Then, re-install the interior trim panels.

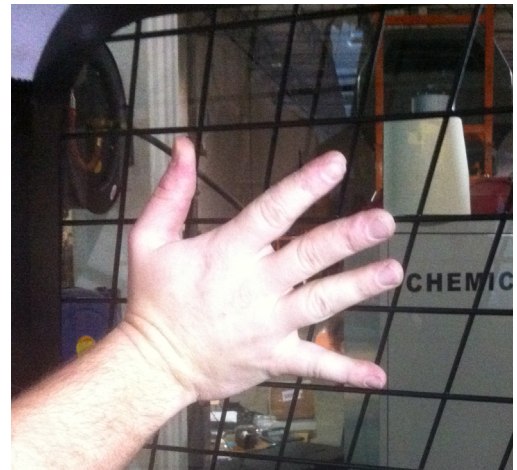

Figure 3

Figure 4

V. Rear Hatch Window Guard Installation

Figure 5

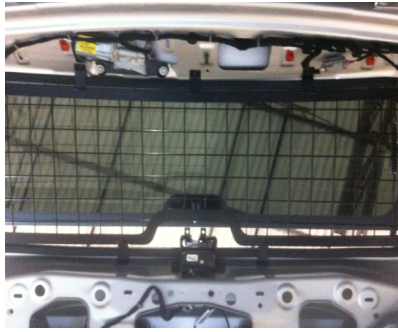

Figure 6

Figure 7

- A. Remove the T30 torx bolt holding the grab handle in place (Fig. 5). Disconnect wire attached to the switch.
- B. Gently pry the upper trim panel from the vehicle. Repeat the process for the lower trim panel.
- C. IT IS VERY IMPORTANT TO HAVE FRAME IN THE CENTER OF HATCH. Align the centerline marked on the window frame to the center of the hole (shown in figure 6-7).
- D. With the window guard centered on the vehicle, place tension on the guard, forcing the mounting brackets into position.
- E. Before attaching the window guard, ensure that the rear window defrost wiring is routed correctly behind the window guard (Fig. 8).
- F. Attach the mounting brackets to the vehicle with the provided self-tapping screws. It may be necessary to drill a 3/32" pilot hole before using the self-tapping screws.

Rear Defrost Wire

Figure 8

NOTE: *A second person may be necessary to secure the window guard to the vehicle while keeping the brackets aligned with the sheet metal.*

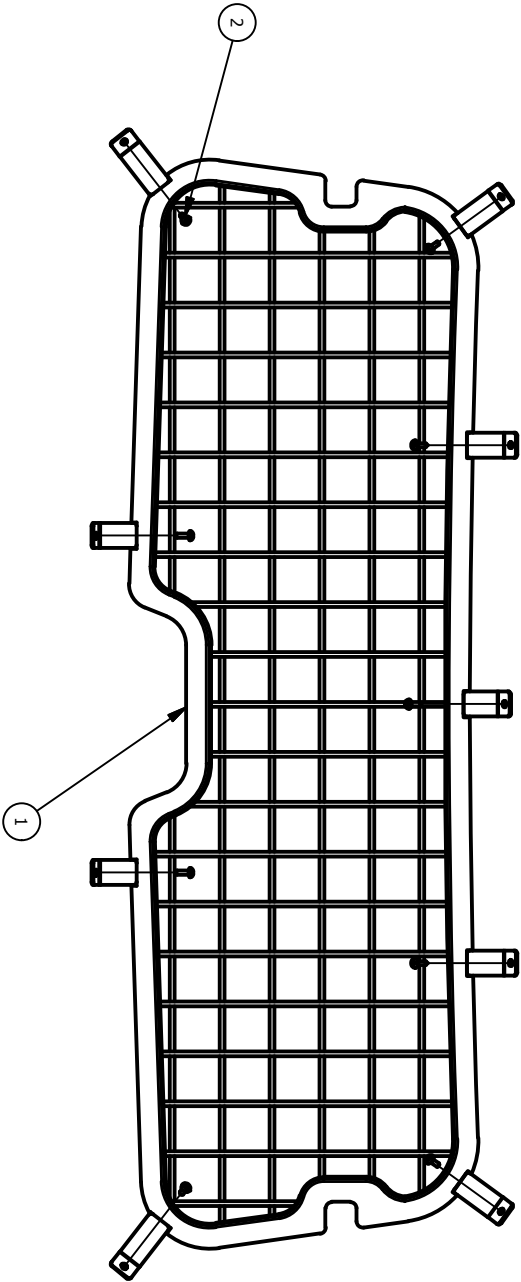

- G. Hold the OEM lower and upper panels in place over the window guard. Carefully mark the areas where the trim contacts the window guard mounting brackets, and trim these areas on the panels so they will fit properly into place over the guard.
- H. Re-install the OEM Rear Hatch panels to the vehicle.

VI. Installation Complete
